

Customer Communication Add-on to OSAS Accounts Receivable

Customer Communication add-on to Open Systems Accounting Software currently contains five tasks as shown below:

They are:

COMMUNICATION MAINTENANCE

GENERATE CUSTOMER ATTACHMENT EMAILS

GENERATE CUSTOMER INLINE EMAILS

CUSTOMER GROUP EMAIL MAINTENANCE

CUSTOMER EMAIL HISTORY INQUIRY

Each are described in greater detail as follows:

GENERATE CUSTOMER ATTACHMENT EMAILS

This routine generates pending emails only for those with attachments. The user selects (as shown below) only those to be sent that match the customer email code type as well as whether it is an internal OSAS generated attachment or external previously generated document. Therefore, it is possible that if one has a mix of emails to be sent, this routine will be required to be run for each selection type needed.

The user is allowed to override the standard subject line saved in the email setup routine for a customized one to be used on this run.

GENERATE CUSTOMER INLINE EMAILS

This routine generates pending emails only for those with no attachments but just inline body text. The user selects (as shown below) only those to be sent that match the customer email code type. Therefore, it is possible that if one has a mix of emails to be sent, this routine will be required to be run for each selection type needed.

The user is allowed to override the standard subject line saved in the email setup routine for a customized one to be used on this run.

The screenshot shows a software window titled "Generate Customer Inline Emails". The window has a menu bar with "Commands", "Edit", "Modes", "Other", and "Help". Below the menu bar is a toolbar with various icons and two buttons: "OK" and "Abandon". The main area of the window contains the following fields:

- "Cust Id" label next to a "From" text box with a search icon.
- "Thru" label next to a "Thru" text box with a search icon.
- "Email Type:" label next to a dropdown menu currently set to "General".
- "Subject Line:" label next to a text box containing the text "message from John Doe Plastics".

Below these fields, the text "Generates EMailS Only for INLINE Email Format" is displayed.

At the bottom right of the window, there is a status bar with the following information: "Company M | 02/04/2015 | Terminal T000 | OVR".

CUSTOMER GROUP EMAIL MAINTENANCE

This routine is used for generating the same email with the same attachment and inline text to a group of customers. This may be the ideal task to use for sending monthly newsletters.

The user enters the name of the previously created file, the customer email type to be selected and the subject line. The user may also enter up to thirteen lines of body message text.

The list of customers that is associated with the chosen email type is displayed. The user may decide to delete individuals off the list before sending the email.

The screen also provides buttons for saving the list to be recalled at a later time to be generated.

The screenshot shows a software window titled "Customer Group Email Maintenance". The window has a menu bar with "Commands", "Edit", "Modes", "Other", "Scroll Commands", "Information", and "Help". Below the menu bar is a toolbar with various icons and two buttons: "OK" and "Abandon".

The main area of the window contains the following fields:

- Document Name:** unbilled.txt
- Email Code:** General (dropdown menu)
- Subject Line:** here is your monthly newsletter

Below these fields is a table with two columns: "Cust Id" and "Name". The table contains two rows of data:

Cust Id	Name
CHGBRD	MANAGEMENT
WILLIS	MGMENT LLC

At the bottom of the window, there are five buttons: "Add Inline Text", "Edit Inline Text", "Cancel", "Generate Emails", and "Save".

The status bar at the bottom right of the window displays: "Company M | 02/04/2015 | Terminal T000 | OVR".

CUSTOMER EMAIL HISTORY INQUIRY

This screen allows the user to view the standard OSAS email history for a selected customer from a given start date. Each line displayed shows the date the email was generated, to whom and the name of the file attachment.

On highlighting any given detail line, one may click the VIEW button and see the full email address, document name and location, subject line, and inline text (if any). (Currently, inline text is not implemented on any OSAS generated invoice, quote or statement form that is emailed to a customer)

Notes:

Benefits of these routines are:

The ability to send a group email of one specific document that does not need to be generated by OSAS.

The ability to send a specific document as an attachment and include inline text.

The ability to send a specific document to a customer without the need to first link it to the customer master file.

Customized Subject Line

Viewable Email History Inquiry

These routines work within the parameters of regular OSAS internally generated emails. If the RM options are set to SEND EMAILS IMMEDIATELY, then one must use care in generating these email routines. Otherwise, all emails are first routed to the EMAIL QUEUE for review and processing.

The sender's email address is established in the set-up maintenance routine.

OSAS Emailing is currently limited to using standard smtp servers with probable ssl socket and authentication. It is not intended for sending outbound high volume traffic typically found on exchange servers.

There is no linkage to email readers such as Outlook. If you want a record of the email other than the standard email history, be sure to create a customer record and email link to yourself so that you get a copy.
